

This is adani™

Adani - A leading renewable energy business

YOU MIGHT HAVE HEARD OF US

Adani is a globally integrated infrastructure and energy business. That means we are far more diverse than you might imagine.

We specialise in operations that span ports, multi-modal logistics, power generation, transmission, mining and even agriculture.

When you hear "Adani" think 'energy', think 'future' and think 'long term'. Because that's what we do wherever we partner in the world.

You might have heard that we are playing a significant part in the plan to provide power to hundreds of millions of people who currently don't have electricity, to lift them out of energy poverty. Adani is India's largest private power producer with over 12,000 MW of installed capacity growing to 20,000 MW.

To put that in perspective, Queensland has around 14,000 MW of installed capacity including mothballed generators, and New South Wales, Australia's largest state, has 20,000 MW of capacity. This is mostly older generation thermal coal fired energy.

Along with our significant supercritical and ultra-supercritical cleaner thermal power capacity, you might also want to know more about the long-term solar future Adani is building in India and with local regional communities - right here, right now.

WORLD'S LARGEST SINGLE SITE SOLAR PLANT IN INDIA

Adani owns and operates the world's largest single-site solar plant in Tamil Nadu, India, which uses the latest solar technology to maximise energy output, with a generating capacity of 650MW.

Spread over an area of 2,500 acres (10km²), it's an important part of Adani's portfolio of renewable energy plants with capacity of over 650MW.

WORLD CLASS SOLAR PANEL MANUFACTURING

Adani also own and operate a world class solar panel manufacturing plant in Mundra, Gujarat and produce 1.2GW of panels every year, including hi-tech solar PV cells and modules using advanced Multi, Mono PERC and Bifacial cell technology.

Adani aims to become a fully-integrated solar PV manufacturer with a capacity of 3GW, producing the entire value chain from polysilicon to modules all under one roof, by 2020.

TWO NEW SOLAR POWER PLANTS HERE IN AUSTRALIA

Adani Australia aims to build a leading renewable energy business operating in Australia, with a 1500MW portfolio of renewable power plants by 2022.

Our solar projects already underway are located at Rugby Run near Moranbah, and at Whyalla in South Australia.

We plan to partner with our customers to provide affordable, reliable and sustainable energy solutions to industry and the wider community.

A world-class thinker in energy and solar, powering growing needs in India and Australia and generating even more jobs right here.

This is Adani.
