# ACKNOWLEDGEMENT OF COUNTRY

We acknowledge the sovereignty and ownership of all traditional and custodial owners of the First Nations on whose land we live and work. We acknowledge the Barunggam, Yiman, Jarowair and Western Wakka Wakka people of the Western Downs, past, present and emerging, their elders, languages, customs, culture and connection to this wonderful country.

# WELCOME

**Ali Davenport**  
**CEO**  
**Toowoomba**  
**and Surat Basin**  
**Enterprise**

The Western Downs is proudly known as the Energy Capital of Australia, with an abundance of traditional and renewable energy sources generating an exciting new wave of development. The Wambo Wind Farm is an outstanding project for this region, as it will contribute to Queensland's renewable energy target and create supply chain opportunities for local businesses. A project of this size benefits the regional economy by creating hundreds of jobs during construction as well as ongoing roles once the wind farm is operational.

Toowoomba and Surat Basin Enterprise (TSBE), along with Cubico, are committed to ensuring this project maximises as many opportunities for local companies and the community as possible. This can only be done by first understanding the current wind farm capability of local businesses which has been thoroughly analysed in this report. From this, we're able to map the region's potential supply chain capacity to harness the opportunities for not just the Wambo Wind Farm, but also the many other wind farms which are looking to establish in the Western Downs.

I look forward to seeing local businesses benefit throughout the construction and operational phases of the Wambo Wind Farm, which will further establish our region as a powerhouse of clean energy.

**Paul McVeigh**  
**Mayor**  
**Western Downs**  
**Regional Council**

It is my pleasure to welcome you to the Western Downs.

Our region is at the forefront of the changing world, and we are excited to embrace the ongoing surge in renewable energy projects being established locally.

It's fantastic to see our region continuing to demonstrate its ability to attract new and diverse investment opportunities which helps stimulate the economy, create local jobs, and bring more people to the region.

Here on the Western Downs, it's the people that make it - and I welcome everyone involved in the delivery of this project. Council proactively promotes the importance of business and industry actively living and buying local, and I encourage you to be a part of our community and contribute to all that makes our region so great.

Our region is bursting with opportunities and with a range of projects underway to boost our liveability, Council is excited to embrace a new era of growth and prosperity across our community.

**David Smith**  
**Cubico Sustainable**  
**Investments**

Cubico is excited to be supporting local Queensland industry by finding ways to maximise local content for the Wambo Wind Farm and we have worked closely with TSBE to break down the wind farm construction process and identify as many opportunities as possible for local business.

Cubico is a global investor, owner and manager in renewable energy with over 3GW in 12 countries but this study is an exciting first for us and the wind farm industry and we are proud to have made it happen. The Wambo Wind Farm is an important project for Cubico as it is the first that we have developed in Australia and the biggest that we have developed across our global operations. We are determined for it to succeed not only as a long-term investment for our shareholders but a landmark contribution to the local economy.

We also wish for this study to serve as a template for other wind farm projects to maximise their local content. With a pipeline of wind farm projects in the region, local businesses can invest in their own capability with confidence that there will be demand for their services for years to come.

The first stage of the Wambo Wind Farm is due to start construction this year with further stages to follow. Please use this report to see where you can fit into the local wind farm supply chain because we believe that Queensland businesses will succeed when given the opportunity.

# KEY WIND FARM STATISTICS

The worldwide push for renewable energy sources, lower power prices and the reduction of carbon-emitting fossil fuels is the driving force behind Australia's expansion in wind farm developments. Most states and territories have independently legislated their own Renewable Energy Targets (RETs) and many companies are seeking to source cheaper and lower impact electricity, which means the construction of wind farms is happening all around the nation. In Queensland there are currently 50 large-scale renewable energy projects (operating under construction or financially committed). This represents \$10.7 billion of investment, 7,900 jobs, 5,774 megawatts of clean energy and more than 13.8 million tonnes of avoided emissions each year (current as at 1 January, 2022).

As of February, 2022, there are 34 large-scale power projects under development in the TSBE local government areas with a total capacity of almost 11GW. Around 98% of these projects are clean energy; wind, solar or battery. This capacity represents almost 30% of all projects under development in Queensland and 7% of all projects National Energy Market (NEM) wide. As wind farm numbers increase, it is anticipated that wind energy will capture a greater share of the total renewable energy target.

There are two phases in the life of a wind farm: construction and operation. The wind farm construction sector provides engineering, procurement and construction services for wind power generation projects. These are "major projects" and attract highly sophisticated operators who employ large numbers of skilled workers. IBISWorld has provided us with the following statistics on the industry to give an idea of scale and scope in Australia and in Queensland. No matter where wind farms are being constructed, they bring economic opportunities for local businesses. Understanding the industry and how to leverage these opportunities is key for regional communities.

During the period 2022-2027 the windfarm sector is forecast to undergo a;

- 5.9% Annual growth of major companies specialising in the Wind Farm sector
- 12.9% Annual growth of jobs in the sector
- 15.8% Annual growth in wages for workers in the sector
- Annual growth of \$1.3 billion in revenue

Source: IBISWorld December 2021

## RENEWABLE ENERGY ZONES - REZ

A Renewable Energy Zone (REZ) is an area with high quality renewable resources like wind and solar that can be developed in a coordinated way with strong transmission lines to deliver the electricity to where it is needed.

The Queensland renewable energy sector has grown rapidly since 2015. This investment boom has delivered employment and infrastructure outcomes into mostly regional areas of Queensland. However, new challenges have emerged for renewable developers in managing risks like congestion and other grid constraints.

Coordinated development means multiple generators can be connected in a cost-effective way. This supports an optimal electricity generation mix in Queensland that complements existing and emerging industries and benefits local communities.

The Southern REZ covers areas identified by the *Australian Energy Market Operator* as having good quality renewable resources and other characteristics suitable for renewable energy development.

In these areas we will:

- Undertake strategic network investments
- Streamline the development of new renewable energy projects
- Work to match new and existing industrial energy demand with our cheap, clean, renewable energy.

**How Local Communities Benefit**

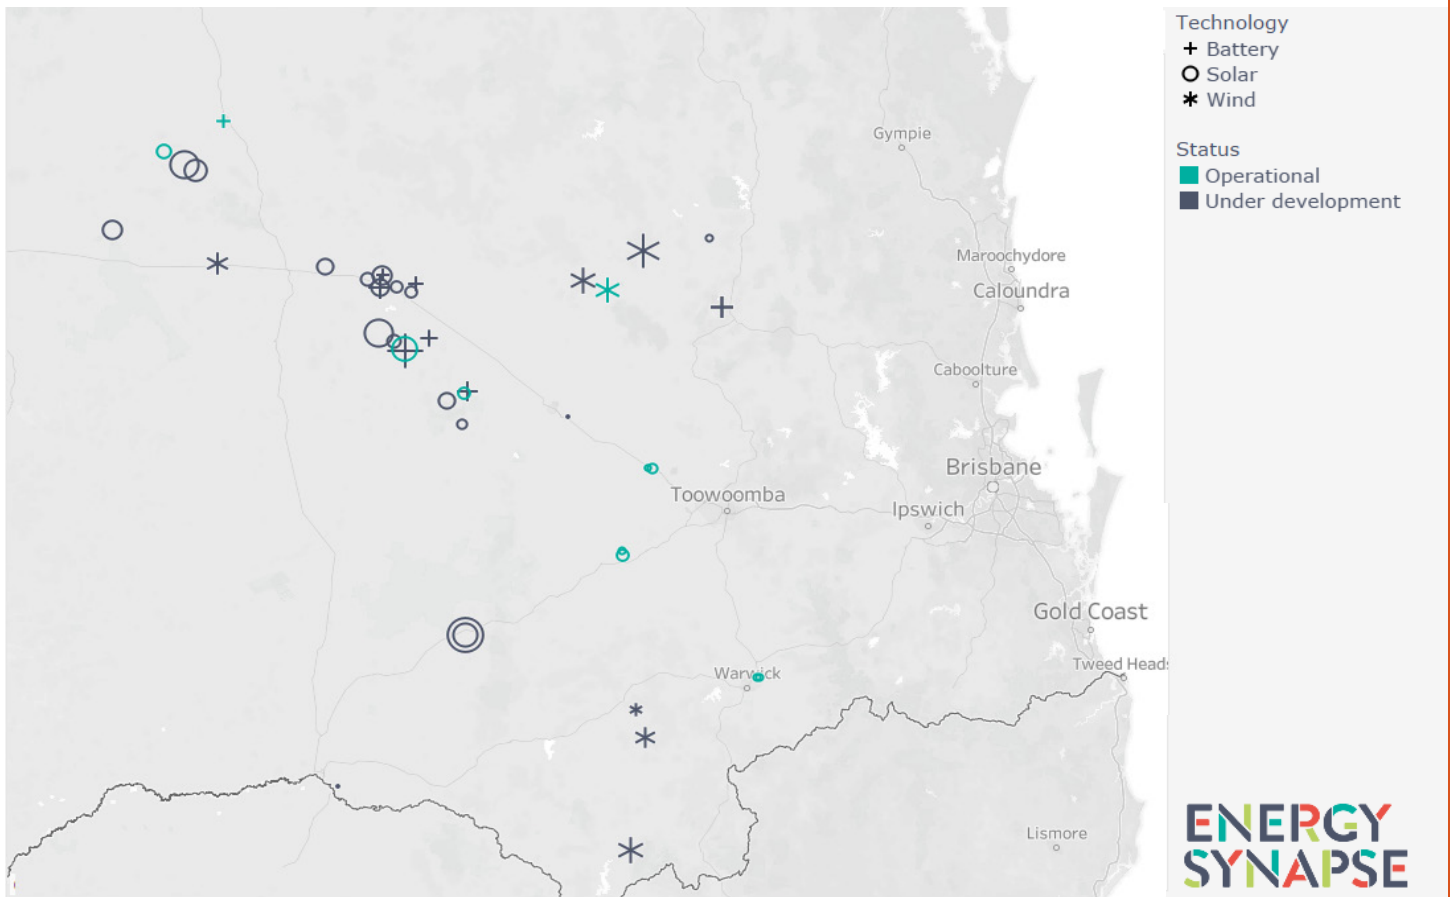

Development of Queensland REZ (QREZ) will deliver investment into Queensland’s regional economies, driving employment, energy and infrastructure outcomes. Long-term development of QREZ is focused on delivering lasting community benefits on the path to 50% renewable energy by 2030.

The local benefits and social outcomes will be in two main areas: local content participation and community benefits from social licence activities.

The ultimate number of jobs will be dependent on the design and scale of the renewable projects developed. Many indirect local jobs are expected to flow through to communities as businesses are called upon to support both the initial construction phase and ongoing project needs. This could include greater local content participation in supply chains and manufacturing of renewable energy components.

Source: Department of Public Works Queensland

# MAP OF WIND, SOLAR AND BATTERY PROJECTS

Source: Energy Synapse [www.energysynapse.com.au](http://www.energysynapse.com.au)

There are currently 34 large-scale power projects under development in the TSBE LGAs, with a total capacity of almost 11 GW

This capacity represents almost 30% of all projects under development in QLD, and 7% of all projects NEM wide

98% of TSBE capacity under development is clean energy (wind, solar, battery)

# WAMBO WIND FARM

The Wambo Wind Farm (Project) is a proposed wind energy development located near Jandowae in the Western Downs region of Queensland. The Project, the first stage of which is due for completion in 2024, will feature up to 110 turbines contributing approximately 500MW of renewable energy to the national electricity grid. The site will also include a 50MW/200MWh battery storage and associated infrastructure. The Project will help the Queensland Government reach its renewable energy generation target of 50 per cent by 2030 as the state transitions to a low carbon emissions future.

## Why Wambo

Located in the heart of Australia's energy capital on the Western Downs, the Wambo Wind Farm project is located approximately 200km north west of Brisbane and 20km north east of the town of Jandowae. The area has been identified for its excellent wind resources, attractive grid connectivity and low environmental impact.

## Who We Are – The Developers

The Wambo Wind Farm was conceived and explored by Renewable Energy Partners (REP) in mid-2018. In late 2018 and 2019, REP secured a number of landowners to participate in the project. In 2019 REP and Cubico Sustainable Investments agreed to co-develop the Project with the intent that Cubico would be the long-term owner and operator of the Wambo Wind Farm.

## Cubico Sustainable Investments

Founded in May 2015, Cubico Sustainable Investments is one of the world's largest privately-owned renewable energy companies. It is backed by the resources of Ontario Teachers' Pension Plan, Canada's largest single-profession pension plan, and PSP Investments, one of Canada's largest pension investment managers. Cubico's global portfolio in 12 countries has an installed gross capacity of 3GW, with nearly 2GW in construction and its development pipeline. Cubico is headquartered in London and has offices in São Paulo and Brazil, Greece, Milan, US, Mexico, Spain, France, Australia, Uruguay and Colombia.

## Renewable Energy Partners

REP brings together a team of highly motivated professionals with over 80 years of combined experience to originate and develop large-scale renewable energy projects in Australia. Other current REP projects include the 250MW Hopeland Solar Farm, the 500MW Eungella Wind Farm and the 1.4GW+/11GWhr+ Bowen Pumped Hydroelectric Scheme. REP also have a number of other renewable energy projects totaling over 3GW of generation in various stages of development.

When fully operational, the Wambo Wind Farm will produce enough clean energy to

power approximately  
170,500 houses  
annually

prevent the emission of more than  
1.1 million tonnes of carbon dioxide  
into the atmosphere each year

## Timeline

**October 2020**  
Development  
approval issued

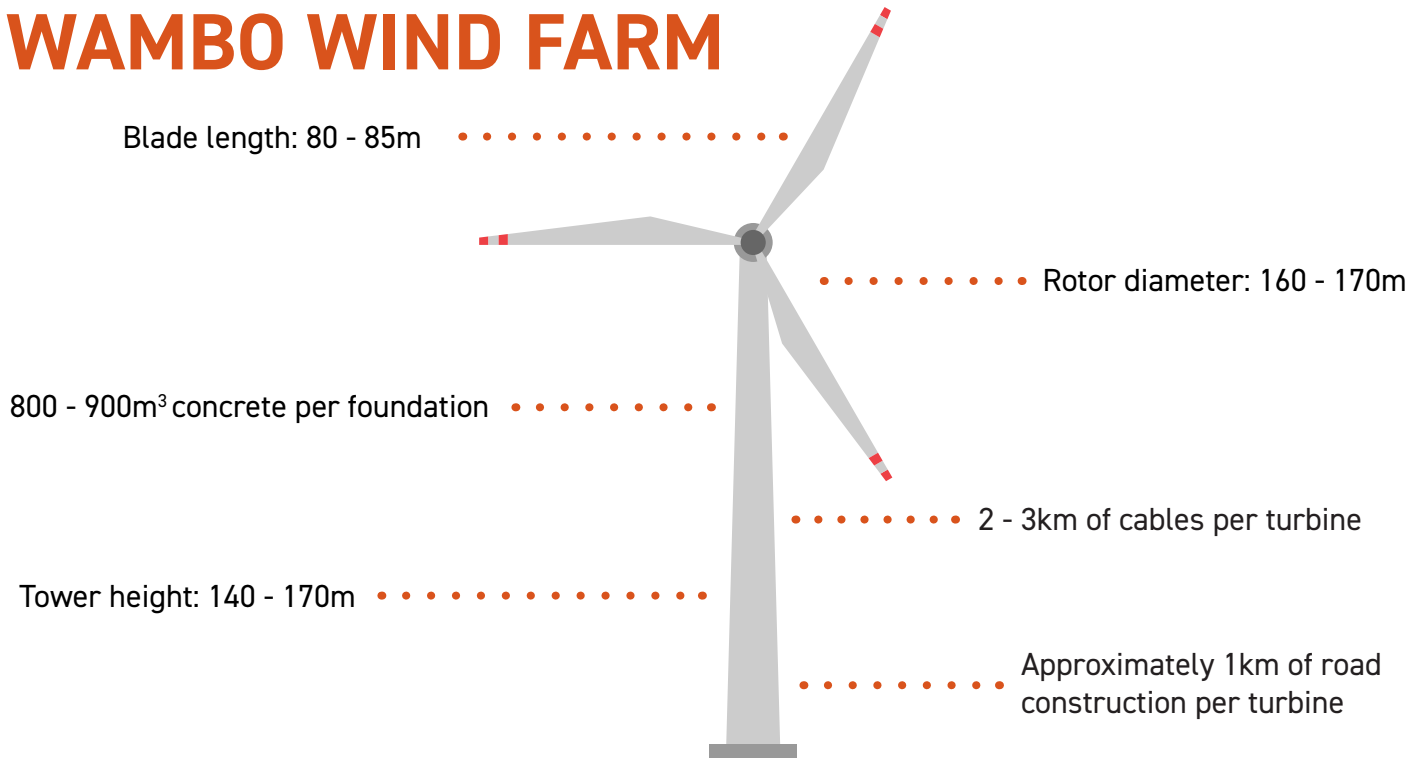

**2022**  
Construction  
expected to start

**2024**  
Wind Farm operation  
expected to begin

# WAMBO WIND FARM

Not all wind farm towers, turbines and blades are the same. Wambo Wind Farm's towers and blades will be constructed to meet The Project's specific requirements.

**Date of completion**  
First stage operational  
in 2024

**Total MW on completion**  
500MW

**Site size**  
13,000 ha

**Employment**  
200 during construction  
20 during maintenance  
operations

**Number of turbines**  
110 turbines approved,  
planning approximately  
40 in each stage

**Overall cost of project**  
Approximately \$1 billion

## Stages

Wambo Wind Farm project will be built in two stages:

**Stage One** of the Project will deliver around 250MW of renewable wind energy to the national electricity grid. It will see the construction of approximately 42 turbines.

**Stage Two** of the Project is contingent on the outcome of feasibility studies and could see up to approximately 40 turbines and 250MW of renewable energy being generated.

# WELCOME TO JANDOWAE

## Location

Jandowae district covers 254km<sup>2</sup> of the picturesque Western Downs region in southern Queensland. From the air, it is a patchwork of colour with fields of wheat, barley, sorghum, and sunflowers surrounded by mountain ranges. It sits within the Indigenous country of Barunggam, the traditional lands of the Barunggam people.

## Getting There

**By road:** 260km from Brisbane, 140km from Toowoomba and 48km from Dalby.

**By air:** Fly into Brisbane or Toowoomba Wellcamp Airports and then drive to Jandowae. The nearest aerodromes for smaller aircraft are at Dalby and Chinchilla.

## Weather

Temperatures range from around 18 to 32 degrees Celsius in summer and 0 to 20 degrees Celsius in winter.

## Main Industries

The Western Downs is known as the "Energy Capital of Australia" with significant investment in mining and renewable energy industries. However, the local economy is underpinned by agriculture, especially beef, with 42% of Australia's feedlots within 200km of Dalby. Service industries for the energy and agricultural sectors provide manufacturing and fabrication, engineering and supplies.

## Community

Jandowae's tight-knit community of around 1,200 people is kept busy creating a happy, healthy and interesting life for its residents.

## Liveability

### Housing

Affordability in the Western Downs is one of its key attractions for workers and families. According to [www.realestate.com](http://www.realestate.com) the median house price in Jandowae is around \$130,000.

### Health

As part of Queensland Health's Western Cluster, Jandowae Hospital offers medical, emergency, outpatients and palliative care. It has a child health clinic and a range of visiting allied health services.

### Services

Help is at hand with government services on your doorstep: Queensland Government Agents, police station, fire brigade, SES, ambulance service, post office and community services such as Meals on Wheels.

### Employment

The Western Downs region is seeking skilled workers across a variety of industries including mining and energy, agriculture, manufacturing, health and labour.

### Education

Families have access to day care, preschool, primary and high school to Year 10.

## Tourism and Things to Do

### Events

- Jandowae Agricultural Show in March
- Jandowae Picnic Races are held in May
- Jandowae Timbertown Festival – biennially in June
- Big Skies, an annual Music Festival at Jimbour House
- Opera at Jimbour – a biennial event at Jimbour House

## National Parks and Adventure

The spectacular Bunya Mountains are just an hour's drive from Jandowae. Mountain biking is popular in the Bunya's and a new 28km MTB trail at Russell Park will open mid-2022.

## Birdwatching

With at least 342 bird species migrating through or living in the Western Downs, Jandowae's local habitat makes it a birdwatcher's paradise.

## Sports

Locals enjoy a variety of activities including golf, tennis, horse racing, horse riding, mountain biking, junior and senior rugby league, netball, squash, pilates, lawn bowls, football and swimming in the 25m six-lane public pool.

## Water Sports

Just 3km from town, the Jandowae Dam, is a popular spot for water skiing and fishing.

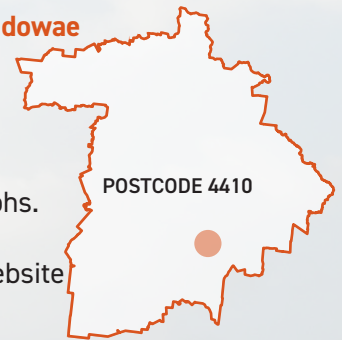

## Arts, History and Culture

- Athlone Cottage Heritage Precinct – 33 Dalby Street. A great place to picnic or just enjoy a piece of Queensland history
- Dingo Fence – follow the signs for 19.6km along the Dalby-Jandowae Road and you'll come to the fence including the dingo sculpture on the corner of George and High Streets.
- Jandowae's Timbertown Festival – CBD. A sculptural celebration of the Timbertown Festival.
- Jimbour House – 86 Jimbour Station Road. Beautifully maintained heritage home frequently open to the public for refreshments and special events.
- Power-pole walk – High Street. Community art on Ergon power poles.
- ANZAC history, be sure to ask a local about "The Little Digger" and "Trumpeter's Corner."

## Your Guide to Living in Jandowae

Western Downs Regional Council has created the "Live Jandowae" guide which is filled with useful information and photographs. You will find an electronic version on the Council's website [www.wdrc.qld.gov.au](http://www.wdrc.qld.gov.au)

# OPPORTUNITIES FOR LOCAL BUSINESS

Wambo Wind Farm is focused on supporting the Western Downs by employing local labour, engaging local businesses and sourcing local supplies wherever possible. Wind farms are labour intensive during construction. Wambo Wind Farm will require around 200 workers during this phase. Once the project is operational, staffing is streamlined and there will be around 20 equivalent full-time staff required to maintain and manage the Wambo site.

## 1. Minimum Requirements

The Major Project sector has some very specific minimum requirements when it comes to working with local business including:

- Pre-qualification when requested
- Quality – a system accreditation
- Financial capability and all necessary insurances
- Project readiness or evidence of track record
- WHS&E Management Plan
- Tendering credentials

## 2. Pre-requisite, Pre-Qualification and Vendor Registration

A contractor that works directly for the OEM (original equipment manufacturer) will be familiar with pre-requisite requirements regarding high risk, highly technical/high value items or operations and maintenance service requirements. It is for this reason that OEMs typically recruit as few contractors as possible. In fact, they often “self-perform” as much of the wind farm requirement as possible thereby carrying the most risk.

## Local Business Opportunity

The balance of plant contractor will likely be a specialist in civil/earthworks or electrical or both and as such have pre-requisites regarding pre-qualifications to work with them.

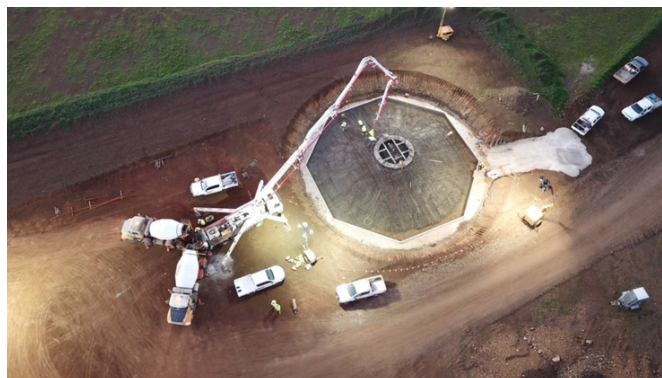

Image: Wagners

## 3. Typical Contracting Model

The typical model for contracting on a wind farm involves the developer selecting an original equipment manufacturer (OEM) for the purposes of securing key equipment. The OEM will partner with a balance of plant contractor who will undertake civil site preparation and electrical.

Any specialist, highly technical or high-risk capability such as craneage, transport, high voltage electrification, controls and SCADA would likely fall to the Tier One OEM contractor. A local company would need depth of capability and sophistication to pre-qualify and work with a Tier One.

A significant site contractor working for the balance of plant contractor may recruit subcontractors. This is often an ideal opportunity for local firms to supply products and services such as water cartage, earthmoving equipment, labour hire and so on.

### The Powerlink Story

The Wambo Wind Farm developer has engaged Powerlink for a significant scope of critical work. This is to establish any transmission and distribution assets such as construction of electricity towers, high voltage lines, transformers, substations and control rooms for the Wind Farm.

The specialist work is carried out by Powerlink's own staff or subcontractors registered and pre-qualified with Powerlink to work on electrified sites. These same subcontractors can maintain the electrical assets once operational (if Powerlink does not).

The control rooms on the Wind Farm site involve SCADA systems for automation and monitoring. These can be carried out by local specialist firms. Each system is terminated to one major control centre, also on site, which houses the O&M staff and monitors for complete visibility over the performance of the facility.

Further opportunities for local business and local civil contractors will be required for site preparation including earthworks on concrete pads for Powerlink equipment.

# LOCAL SUCCESS STORIES

Major projects provide many opportunities for local businesses. Not only can they be lucrative but they can also help businesses to grow, fine-tune processes, hone skills and gain valuable experience for future projects. We asked LCR Transport and Newlands Developments to share some thoughts on how working with major wind farm projects has benefitted them.

## LCR Group Pty Ltd

LCR Group is a broad-spectrum mining and industrial services company with a reputation for getting the job done safely and efficiently. We provide leading innovative lift and shift materials handling solutions throughout Australia and PNG.

### Which organisation contracted you to work on their wind farm project?

LCR has worked on five wind farms, now complete, including the Coopers Gap Wind Farm which is owned by Powering Australian Renewables. The company's most recent project was with General Electric (GE) [www.ge.com](http://www.ge.com).

### What was the scope of your involvement?

Oversize logistics and crane work.

### How many of your staff were onsite and for how long?

We had around 25 staff for 18 months.

### What has your involvement in this project meant for your business overall?

This project was a great stepping-stone in the evolution of the LCR/Qube renewable energy division. The project was perfect for our business as it was located in our back yard. It has provided us with a greater understanding of LCR's capabilities in the industry. We were also able to make a substantial investment in equipment for heavy haulage.

## Newlands Group

Newlands delivers design and construction for civil, commercial and industrial infrastructure projects. They are ideas people and problem solvers across a wide range of engineering services.

### Which organisation contracted you to work on their wind farm project?

Initially Newlands was contracted for early works by the project owner at Coopers Gap Wind Farm. We were then contacted by Catcon, the main contractor on site, for the construction of the Powerlink pad and associated access road and drainage works. At the completion of the project General Electric, the OEM, made contact directly to undertake additional post completion works and maintenance.

### What was the scope of your involvement?

- Bulk earthworks for creation of main sub-station pad, access roads and crane pads
- Main road works including intersection upgrades on site and major intersection upgrades between Toowoomba and site to allow for tower and turbine delivery
- Drainage works
- Excavating and backfilling electrical trenches
- General plant and labour hire
- Engineering design
- Removal of crane pads and reinstatement works in accordance with the environmental requirements

### How many of your staff were onsite and for how long?

- 20 - 30 construction staff during six months of construction
- 5 - 10 early works and rehabilitation stage for 24 months

### What has your involvement in this project meant for your business overall?

By undertaking wind farm works, Newlands has been able to gain more experience in the installation of wind energy and broaden our horizons to undertake work with other renewable energy sources such as solar energy. It has also allowed the company to be able to expose smaller local companies that were subcontracted to expand their experience by working on larger scale projects and renewable projects as our subcontractors.

# ANALYSIS

## Methodology

The methodology used for this report and assessment of local content opportunities ties to a market sounding exercise of local businesses interested in wind farm construction and development. The mapping tool used to generate this information was assembled through the work of TSBE, OEM (Original Equipment Manufacturer), Balance of Plant contractors and the Wambo Wind Farm development team at Cubico Sustainable Investments. The teams collaborated to extract the project phases of development from feasibility to commissioning and also highlight areas available for local content participation. They have also acknowledged specialist areas that will not be available for local content such as proprietary equipment or services.

## Capability

From a review of the participants in the mapping exercise, there are several experienced and highly capable subcontractors in the group. They bring experience from other wind farm projects in Queensland and interstate including Victoria and South Australia. It is worth noting that this level of expertise could be significant in terms of local content success.

## Strengths – Civil Construction and Earthwork

Surat Basin's civil contracting businesses have a wealth of experience and background in the construction and renewable energy sector. Wind farm developments begin as civil construction sites until the electrical infrastructure is commissioned. This means that many of the disciplines regarding site establishment (site construction, earthmoving, materials, trenching, access roads, local government roads, earthworks and drainage) can be covered by capable local firms. These firms would be encouraged to compete for the work.

## Strengths and Opportunity - Electrical

The Surat Basin region is home to several highly-skilled commercial electricians with the skills to work in the industrial sphere related to wind farm construction. In terms of renewable development, these commercial electricians would be working with specialist wind farm balance of plant contractors with whom they may not be familiar.

Barriers to entry for local businesses may be in the area of pre-qualification and vendor management requirements for medium voltage electrical specialists.

Regarding electrical opportunities from the high-voltage side, the region's existing sub-contractors for companies such as Powerlink, Ergon and Urban Utilites will be able to compete for work in the wind farm sector. Powerlink already has a considerable scope of work for the Wambo Wind Farm including high voltage connection following construction and once electrical connection preparation is complete. There is also opportunity for subcontractors to take on work not carried out by Powerlink's own workforce.

## Strengths and Opportunity - Skills

The region's electrical firms bring a depth of experience and capability in other industrial sectors such as gas, coal and power stations. These companies have a large well-trained workforce established through quality apprenticeship schemes. The opportunity for employment does have a risk factor: the wind farm may require a large cohort of skilled workers over an extended period (24 months, depending on size of project) which may take local firms away from their traditional customer base. It is hoped that at the decision making level, local employers would see that the benefits of working in the renewables industry, as an emerging sector for Queensland, outweigh any inconveniences.

## Threat – External Bias

Local expertise (in major projects) can easily be misunderstood or lost on major project proponents. This is due to an overlay effect where a company's previous project experience in another region is assumed incorrectly. This is especially prevalent in areas relating to site establishment, site assessment, environmental & engineering consultancy and management, workforce knowledge and understanding, and also local community engagement.

Major projects contributing funds to community activities, also need to ensure committed local spend in the region either through hiring staff, booking accommodation and meals, and establishing accounts at service stations. These service providers should be sought from towns closest to the project with reporting parameters on local spend set to record this aspect of economic contribution made by the project.

# OTHER REPORT CATEGORIES

## Positivity – Innovation in equipment and technology from a new emerging sector

Wambo Wind Farm will capture the attention of elite, international companies General Electric, Siemens Gamesa, Vestas and Goldwind. Equipment used on the Wambo Wind Farm will feature cutting edge design and efficiency to power communities of the future. The community is set to be the recipient of world-class technologies and the Western Downs region stands to benefit by embracing and leveraging opportunities offered by OEMs.

## Opportunity

The Surat Basin is home to innovative and historical entrepreneurial enterprises and businesses. These larger international businesses have the opportunity to leverage and grow innovation utilizing this innovative supply chain and potentially grow these local business into global entities. These businesses, if given the opportunity to present solution based procurement in a correct and timely format will foster innovation and leave a lasting legacy.

Wind farm development is often accompanied by large battery energy storage systems or BESS. BESS is used to stabilize and moderate the electrical grid from the influx of power produced by large generating projects like wind farms or solar farms. This energy can be stored when not required and then used beneficially when it is in high demand. This in turn reduces the requirement of traditional carbon-intensive power generation such as coal, gas and steam turbine power stations.

## The REZ – Queensland Renewable Energy Zones

The Southern Queensland renewable energy zone (QREZ) represents a geographic area of existing energy assets in the form of power stations, coal mines, electrical transmission, electrical distribution, solar and wind farms. The Queensland Government is assessing the expansion of QREZ to promote further development and ensure continued jobs growth in regional Queensland. A significant focus has been placed on ensuring the flow of local benefits from the state government's commitment to forward major projects. It is vital to facilitate local benefit opportunities at the local level throughout the whole supply chain, fully understand the regional opportunity and maximize these opportunities.

## Training and Skilling to Liveability

Training providers in the Western Downs region have depth and experience in skilling the construction and industrial workforce. This has occurred through

the steady transition of oil and gas development, coal seam gas development, coal mine and power station development, as well as solar farm and now wind farm development. Transition requirements have been identified by government and industry and are supported through funding initiatives. As such, workers with an interest in upskilling from their existing trade should be able to find avenues to move into the renewable arena. Moreover, they should be able to consider a flexible or diverse type skill base in which they're provided with the flexibility to transition from one industry to another. In effect, this might mean that a single trade or dual trade technical worker could be working on a solar farm one day and on a wind farm the next day. They might also work on a traditional power station later in the week. The ability for existing and new workers to find security and variety in their work offers tremendous economic opportunities for the region.

## Transport and Logistics

The transport and logistics sector is a genuine strength of the Western Downs region. Significant road transport networks flow from east to west and from north to south. There is also an established and efficient transport corridor from the Port of Brisbane due to the Toowoomba Bypass. These transport corridors suit heavy vehicle operators for bulk commodities, freight haulage, fuels and special cargo.

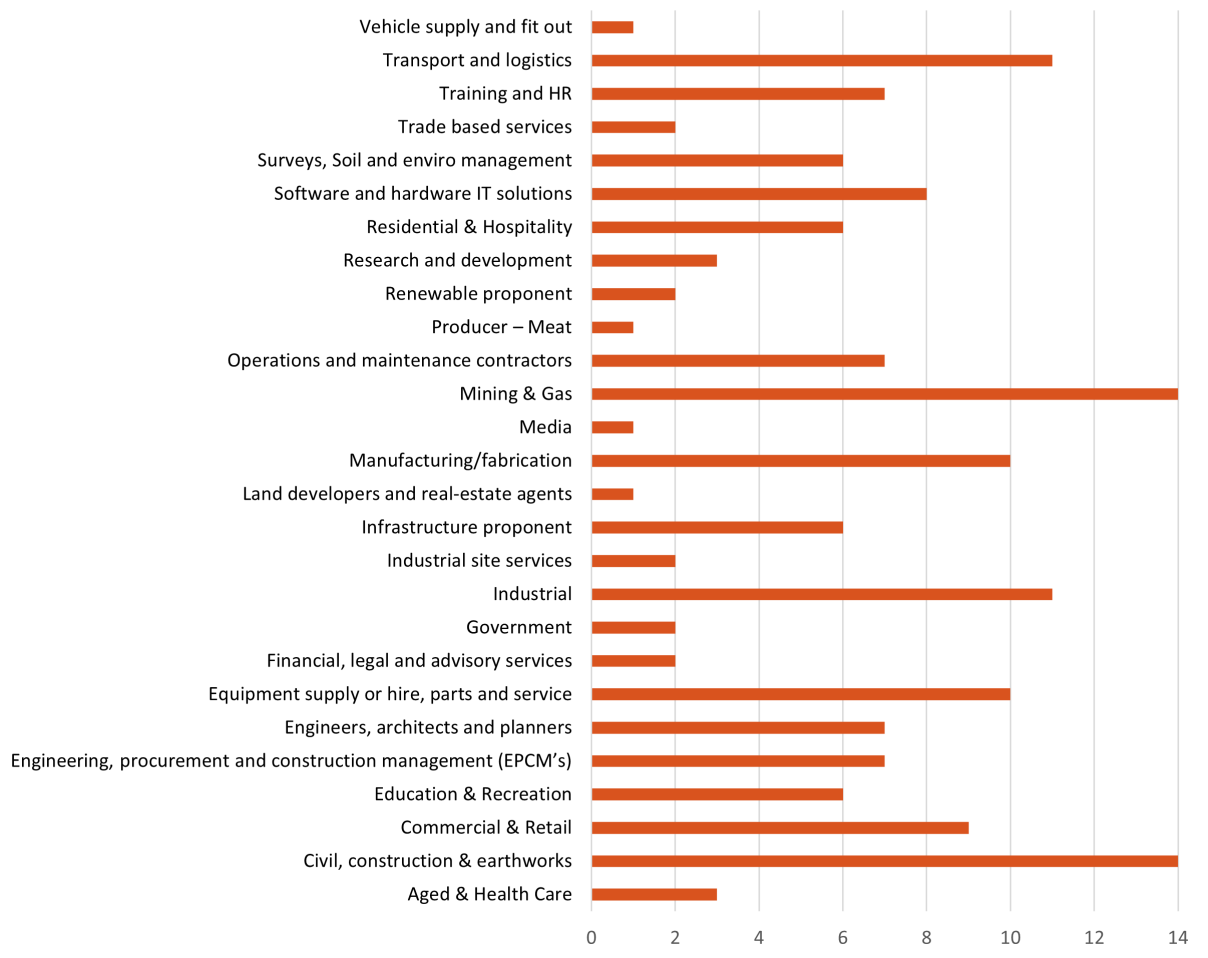

Several specialist freight forwarders manage international delivery of parts to our region while equipment haulage companies and crane companies deliver world class services for OEMs. It is these companies that will be called upon to cart hundreds/thousands of wind farm components to the Wambo site including blades, turbine generators, tower segments, nacelles, cones and so on. Transport assessments and logistics are undertaken well in advance for moving long and heavy items such as wind turbine blades and tower components.

## Environmental, Social and Corporate Governance (ESG)

**Opportunity:** Environmental Social and Governance (ESG) creates a framework for project reporting on their companies or project footprint, but also assists in triple bottom line outcomes. By examining the environmental impact of a project, the social and governance structure in the communities in which they work and clearly communicating their progress, it can ensure for best practice and accountability. We have the opportunity to showcase best practice while setting ESG outcomes on this project.

# COMMUNITY BENEFIT FUND

The **Wambo Wind Farm Pre-construction Community Benefit Fund** is designed to support Jandowae organisations and projects that help build a stronger community. An advisory committee has been formed to help facilitate the funding program. It is made up of local residents as well as representatives from Western Downs Regional Council, David Smith, Head of Australia at Cubico and Luke McDonald, Managing Director of Renewable Energy Partners.

The first round of funds from the project's \$50,000 pre-construction Community Benefit Fund were awarded in May 2021 and the second round in October 2021. The first four recipients are: Taralga Retirement Village, Jandowae Squash Club, Jandowae Bowls Club and Jandowae Golf Club. The fund also contributes to local events such as the Jandowae Races.

For information about the **Wambo Wind Farm Pre-construction Community Benefit Fund** visit the website [www.wambowindfarm.com.au](http://www.wambowindfarm.com.au) or phone 1800 490 475.

Front row (from left) Toni Tanner (Taralga Retirement Village), Celeste Nelson (Jandowae Business and Community Group), David Smith (Cubico Sustainable Investments), George Sturgess (Jandowae Bowls Club), Geoffrey Davidson (Jandowae Bowls Club), John Alexander (Jandowae Squash Club).  
 Back row (from left) – Andres Messing (Cubico Sustainable Investments), Darren Wood (Jandowae Squash Club), Brendan Tyler (Jandowae Golf Club), Luke McDonald (Renewable Energy Partners).

# DIRECTORY

In November 2020, TSBE invested in the development of a “supplier portal” to map out the skills and capabilities of businesses working in the supply chain of major projects in the Toowoomba and Western Downs Regions.

From this supplier portal, TSBE has created directories for different projects to assist buyers and managers meet local content requirements.

There are 615 business profiles on our supplier portal with 163 of those listed in the following directory developed exclusively for the Wambo Wind Farm project.

Business Nominations - Per Region  
Total: 163

- Western Downs (40)
- Darling Downs (52)
- Maranoa (2)
- South East Queensland (43)
- South West Queensland (1)
- South Burnett (2)
- Central Queensland (1)
- Moreton Bay Region (4)
- Central Highlands (1)
- Northern Tablelands (1)
- North Queensland (2)
- National (12)
- Western Queensland (1)
- Wide Bay Burnett (1)

## AAM Pty Ltd

AAM Pty Limited is at the forefront of the spatial information technology revolution. Their teams in Australia, New Zealand, India, South East Asia and Africa introduced leading innovations to the market such as Topographic and Bathymetric LiDAR, Digital Aerial Photography, high resolution Satellite Imagery, 360° Spherical Imaging, SiteSee, and Pictometry Oblique Imagery.

The company's advanced capabilities are built upon the core disciplines of measurement science, surveying, aerial survey, mapping, data modelling and geographic information systems.

AAM's proven technology leadership includes a range of advanced systems for the collection, analysis and presentation of geospatial information.

Their experts implement geospatial platforms (e.g. ESRI, Geocortex, MapInfo, Bing Maps, Google Earth) and offer consulting on enterprise GIS solutions, spatial data creation and management.

## Accent Environmental

Accent Environmental provides environmental and social impact assessment and management services and strategic advice to private industry and government. Quality and commitment are the hallmarks of the company. They seek to provide advice and services that meet the specific needs of each client and project. Unlike large companies, Accent Environmental have low overheads and efficient internal processes. They are free to pull-together multi-disciplinary teams of the best available specialists to meet the specific requirements of each project. Through their work they have become familiar with local regulatory requirements and developed strong relationships with local regulators and consultants in many countries and jurisdictions.

Sectors Accent Environmental service include:

- Mining and extractive industries
- Renewable energy
- Oil and gas
- Waste management
- Water supply and management
- Industrial and manufacturing

Services they offer include:

- Strategic environmental advice and advocacy
- Environmental and social impact assessment
- Environmental management planning
- Community and government consultation
- Auditing and due diligence

- Construction supervision and management
- Mine rehabilitation and closure planning
- Contamination assessment and remediation
- Flora and fauna assessment
- Cultural heritage assessment
- Water quality assessment
- Acid drainage prediction and management
- Hydrological and hydrogeological assessment and modelling
- Waterway reinstatement and rehabilitation
- Air quality and noise assessment
- Traffic impact assessment
- Visual impact assessment
- Health risk assessment
- Cumulative impact assessment
- Climate change assessment and carbon accounting
- Environmental training and capacity building

Renewable energy clients include:

- Mytilineos RDS (formerly METKA EGN)
- Maoneng
- Edify Energy
- ESCO Pacific
- Neoen
- Halo Renewable Energy
- Sterling & Wilson
- WestWind Energy
- Vestas
- Senvion Australia
- MPC Kinetic

## AFL Telecommunications Australia P/L

## AGTECH360

## AJ Technology Services

AFL would like the opportunity to participate in the supply chain for Electrical Balance of Plant for renewable projects. The primary solutions that AFL provide to these types of infrastructure builds are Underground Fibre Optic Cable, Aerial cables including ADSS and also Enclosures. They can assist right through from early specification to the delivery phase.

Local Australian ISO9001 Manufacturing capability:

Fibre Optic Cable Factory:

Tottenham Victoria

- Fibre Optic Cable manufacturing
- Large storage yard for Just-In-Time Delivery
- Cutting & Labelling to your requirements

Enclosure and Assembly Factory:

Croydon Victoria

- Fibre Optic Enclosures
- Pre- terminated Fibre Cable Assemblies
- Copper Cabling Systems (Cat5/6)
- Technical Equipment Servicing (Testing/ Splicing)
- Rugged Fibre Assemblies

AGTECH360 provides landholders with real time information, communications and surveillance technologies.

AJ Technology Services provides installation and maintain services for communications, cabling, security, CCTV and audio visual systems as well as a range of integrated technologies throughout southern Queensland from their office in Toowoomba.

## AirBorn Insight Pty Ltd

AirBorn Insight provides aerial imagery, mapping and surveying services. They work with engineers, scientists, land developers and other professionals throughout government and commercial organisations. With over 30 years professional experience in engineering, science and GIS, their solutions impact ground management practices, reducing costs and improving outcomes. Better data driving better decisions.

Core services include:

- Accurate volumetric surveys of quarries, mines, landfill sites
- Large scale solar farm mapping projects - spatial and thermographic
- Drone data for precision agriculture and crop research trials
- Infrastructure scanning, digitisation and inspection
- Riverbank erosion mapping, monitoring and analysis
- Environmental monitoring, including bio-condition and weeds
- Thermal imaging to monitor animal populations
- Hydrology modelling and environmental engineering
- LiDAR aerial surveying
- Water quality sampling drones
- Mapping / 3d modelling for urban planning and land development

Other services/capabilities available. As an experienced service provider AirBorn Insight can achieve the right outcome, first time, under a proven safety management system. They offer immediate deployment while taking care of the complexities of drone operations (training, maintenance, aviation safety management, documentation and liability). They can achieve the outcome you need so you can achieve your project objectives as efficiently as possible.

Licensed by the Civil Aviation Safety Authority. Insured for public liability and professional indemnity. AirBorn Insight operate under a structured Job Safety Assessment risk mitigation system - Safety First."

## Australasian Groundwater & Environmental Consultants

Australasian Groundwater and Environmental (AGE) Consultants are Australia's specialist groundwater consultancy. They've been providing water and environmental advisory to industry, agriculture, governments and communities for more than 20 years. AGE empowers informed water decisions through their local insight and global thinking.

The company's highly technical team maintains up-to-date knowledge in government legislation, the latest thinking in water and environmental issues and their significant previous project work throughout Australia and beyond. They understand clients' challenges and are keen to share their depth of knowledge and experience to deliver advice that consistently stands up to scrutiny and advances projects in an ever-changing world.

AGE is known for their depth of specialist knowledge in groundwater management and environmental advisory, across hydrogeology, geochemistry and hydrology. As early adopters of cutting-edge thinking and modelling techniques, their scientific rigour is driven by a dedication to delivering informed, comprehensive outcomes for our clients.

As one of Australia's largest groundwater consultancy firms, they offer end-to-end specialist groundwater advisory services. From field work and discovery, to modelling, analysis and report writing, to monitoring and support, peer reviews and expert witness work - their robust scientific investigations are delivered with uncompromising quality. AGE connect with communities and progress projects through their ability to communicate complicated water issues to a diverse range of stakeholders.

## Batana

Helidon Sandstone Industries (Batana Pty Ltd) operate a licenced quarry/mine adjacent to the proposed rail alignment and produce many products which would be suitable for this project from drainage rock to washed sand. Helidon Sandstone Industries are located on a 104 hectare block and the location next to the proposed Inland Rail allows easy access and opens up many opportunities of material storage and supply. The company has the ability to supply large volumes of sand and water for concrete and also have association with mobile concrete providers.

Helidon Sandstone Industries' large area allows them the ability to store large volumes of material which would ensure consistent supply of material.

## Channell Pty Ltd

Channell is a proud manufacturer, and global supplier of world-class fiber optic solutions, thermoplastic pedestals, and grade level vaults for all your outside plant construction needs. They specialise in end-to-end, full network solutions, and have been at the forefront of industry innovation for over ninety years. The company continues to evolve their products to best serve the ever-changing needs and demands of outside plant construction.

Channell range of Outside Plant (OSP) equipment is vast and includes thermoplastic jointing and distribution closures for copper and fibre optic cable networks, and an extensive range of underground and above ground pit and pedestal products designed to house joints and passive and active electronic & communication equipment. Channell's advanced copper termination and connectivity solutions, including fibre optic management systems are world class.

Whether the application is above or below ground, Channell continues to grow its product portfolio to meet the latest technology and needs of the market. Their facilities today feature high automation robotics and true end-to-end material processing which are certified to ISO9001 Quality Management Systems. By maintaining control over the complete process, Channell can assure that every product they produce is unmatched in quality, structural integrity, and design.

**Coates Hire Operations Pty Ltd**

Since 1885, Coates has been supplying high-quality equipment to a range of industries, including construction, engineering, infrastructure, mining and resources, manufacturing, agriculture and major events. They're more than just Australia's leading equipment hire company though. Alongside the core rental business, Coates offer market-leading temporary works engineering, industrial shutdown management and safety training.

This means they can provide an end-to-end solution, while the national branch network and strong local relationships ensure staff can respond rapidly to your changing needs. By engaging one company to provide equipment and specialist expertise, they'll help you drive efficiency and productivity on your project so you can deliver safely, on time and on budget. Proudly Australian-owned, Coates is part of Seven Group Holdings, alongside WesTrac, Boral, AllightSykes, SGH Energy, Beach Energy and Seven West Media. The company's vision is to be the market leader in safe, smart and sustainable equipment solutions.

With branches in over 150 locations Australia-wide, and over 1 million pieces of equipment across 21 equipment categories; Coates has the range and footprint to deliver when and where customers need it. In FY21, Coates celebrated 136 years of commitment to supporting customers who help build Australia. They operate across a range of markets including engineering, mining and resources, infrastructure, manufacturing, construction, agriculture and major events.

This includes end-to-end solutions for temporary works, traffic management, water management, industrial shutdowns, maintenance, training services and events.

Coates equipment comes backed by a dedicated team of product specialists and engineers covering everything from general hire to special project requirements.

## Corefleet

Corefleet is one of the leading suppliers of light commercial vehicle rental and lease solutions in Australia. With a network of branches across QLD, NSW, WA, as well as Auckland in New Zealand, Corefleet has become a supplier of choice in the provision of light commercial vehicle rental & lease solutions, including set-up and maintenance, for the mining, oil and gas, civil construction and renewables sectors.

The company's customer base includes most major blue chip companies and their contractors as well as 1000's of small to medium sized companies right across Australia.

With origins dating back to the late 1960's, Corefleet has evolved from a family owned West Australian based rental and mechanical services company, to a national fleet services organisation and a member of the Sime Darby group of companies.

Today, the Sime Darby group has a workforce of approximately 20,000 employees in 18 countries across the Asia Pacific region, with a proud history spanning more than 100 years. In Australia & New Zealand, Sime Darby employs approximately 5,000 people across its Industrial and Motors divisions.

## Country Pathfinder Motor

Country Pathfinder Motor is a 16-room motel, offering country hospitality and assistance wherever possible to our guests. The motel is close to the centre of Dalby, in a quiet location with multiple food and shopping outlets within easy walking distance. They offer all meals including home-cooked, fresh dinners. Rooms at the Country Pathfinder Motor have all additions and extras (tea, coffee, Nespresso, iron, crockery/cutlery/toaster/bbq on request), parking right outside the door, off-street parking for trucks and larger vehicles; the substantial rooms have block-out curtains for privacy and peace. Free Wifi and Austar.

The company's point of difference is that they love what they do and bend over backwards to ensure the comfort and convenience of guests. Country Pathfinder Motor understand that work groups often work exhausting hours and staff do all they can to ensure guests are properly fed, their clothes washed, and any chores carried out which they can't manage while out working.

## Entegra Signature Structures

Entegra has been manufacturing sheds and large steel structures for more than 35 years. They are renowned for large clear span sheds unencumbered by internal posts, for pioneering the roof lift method of construction and for the globally patented Ridgeback technology. At Entegra, they realise the exercise of planning, choosing, purchasing, managing and installing a building of any size can be a difficult one. The team of willing and dedicated professionals provide innovative solutions to complex projects across the industrial, agricultural, equine & school sectors. The construction methods used meet and exceed the most rigorous building requirements, whilst also ensuring a fast process with a high quality finish.

## FKG Civil Pty Ltd

The FKG Group is built from a 40+ year construction and engineering heritage, and with offices in Toowoomba, Brisbane, Rockhampton, Roma, Townsville, Cairns and Darwin the FKG Group provides integrated construction, civil engineering and support services for the property, resources, infrastructure and government sectors across Australia.

Their diverse scope of capabilities and proven experience allows them to deliver development, design, construction, civil engineering and facility management services. Today the FKG Group has an enviable, diverse portfolio of projects. This experience coupled with sound reinvestment decisions have formed the robust financial platform that has enabled the FKG Group to grow to the Tier-2 contractor it is today.

The FKG Group is committed to delivering value for clients through their core business units and service partners; providing integrated, total project solutions. The company's diverse scope of capabilities and proven experience allows them to deliver development, design, construction and engineering services to the following market sectors:

- Transport
- Infrastructure
- Industrial
- Oil and Gas
- Defence
- Health
- Energy and Resources
- Utilities
- Camps and Accommodation
- Retail and Commercial Residential
- Aged Care / Retirement
- Education
- Hotel and Leisure

In addition to their core construction and engineering services, the FKG Group have developed a number of complementary, niche service offerings to deliver across the project life cycle. These include NRG Electrical (Electrical Communications); FKG Group Plant Hire Services (400 + major pieces of plant, available 24/7); Total Hydraulic Services (Commercial hydraulics and plumbing); Obadare Group (Certified welding, fabrication and inspection specialists) and Auscoil (coiled tubing services).

## Fleming's Welding Service

Fleming's Welding Service (Pty) Ltd. is a manufacturing company, based in Roma, Queensland providing specialised welding and allied services to the oil and gas industry since 1994. Fleming's delivers professional, high quality welding, fabrication and maintenance services primarily to the Oil and Gas industry. Their core business consists of new works, unscheduled repairs and maintenance of pipe work and rig equipment using mobile welding facilities, and large scale fabrication in their workshop.

**IOR**

IOR conducts diesel stops, bulk fuel deliveries and bulk fuel storage tank solutions to Southern Queensland and beyond.

IOR's regional depot network is operated by the local community members. They distribute bulk fuel to surrounding communities and regionally-based industries, such as the long-distance transport, farming, local councils, mining, renewables and oil and gas.

IOR believe in continued innovation to offer the best service to customers. This has led the company to the development of fully integrated fuel management services, fluid storage and handling solutions, such as frac tanks and much more.

IOR is dedicated to safety—for themselves, customers and the community—and it is IOR's highest priority. They continuously invest in upgrading their fleet to improve the environmental and safety impacts of trucks. IOR's aviation fuels are delivered using dedicated fleet and equipment to minimise contamination. At the same time, they continue to upgrade depots and diesel stops to higher standards to improve safety and customer experience.

IOR has third party certification through independent registration body; QAS International, in the following standards: ISO 45001:2018 & AS/NZS 4801:2001 - Occupational Health and Safety Management Systems; and PAS99:2012 - Integrated Management Systems (ISO 9007:2015, ISO 14001:2015, ISO 45001:2018 & AS/NZS 4801:2001).

## Lowe's Petroleum Service

Lowe's Petroleum has been leading the way in fuel and lubricant distribution since 1977. The company has come a long way since its humble beginnings with one truck and one driver in small regional town of Boggabilla, NSW in 1977. Partnering with BP in a long-term joint venture in 2015, they have expanded their fleet and distribution network throughout Queensland, New South Wales, Victoria and Tasmania.

Lowe's Petroleum pride themselves on consistently providing quality products as well as better and more effective solutions for customer's ever-changing needs. With extensive local experience in rural and regional Australia, Lowe's Petroleum is able to offer local service through their network of bulk fuel and lubricant depots, delivery vehicles and retail service stations delivered by a team of people who understand the local communities in which they operate.

The company has a broad base of customers from the primary producer, industrial, mining, transport and retail sectors. Each year they sell and deliver over 1 billion litres of petroleum products to the regional and rural parts of Australia. Service station shops offer an exclusive range of convenience retail products as well as food and carwashes in selected sites.

Lowe's Petroleum are always seeking ways to provide total business solutions to customers. They provide a range of fuel and lubricant storage and dispensing solutions, such as On-Site Refuelling fuel delivery service. With such a large network of service stations and unmanned locations (24 hour refuelling), the BP card network is expanding, and Lowe's Petroleum has taken up new card technology with superior reliability, broader access and easier to use equipment.

## MarchNet

MarchNet creates value by connecting people in remote places. As an ACMA licensed Telecommunications carrier, they design and deliver quality, timely and affordable telecommunications services. They enhance the effectiveness and productivity of their clients in regional and remote locations, where 3G and satellite services provide expensive and/or poor solutions.

MarchNet are passionate about reducing the impact of isolation for those working and living in regional and remote places by providing fast, reliable internet and telecommunications services:

- Deliver remote internet and private data services via fixed wireless, Fibre and Ethernet technologies
- Specialists in Wi-Fi networks and guarantee solutions designed to deliver high speed, reliable Wi-Fi coverage
- Implement SCADA and IIoT network solutions to allow clients to improve operations and increase long term returns
- Design office networking solutions, including VoIP, switching and Wi-Fi, suitable for clients operating in regional and remote locations
- Provide network security, ongoing remote monitoring services as well as maintenance and support to meet expectations and provide exceptional value for money

## Mandana Pty Ltd

Mandana's primary aim is to operate a successful business which provides recruitment, labour solutions and targeted mentoring programs to support Indigenous talent. They commit to embed deep and powerful cultural awareness through Mandana and provide for a meaningful and sustainable journey for all those involved.

- Mentorship (Workforce)
- Labour Hire
- Indigenous Recruitment
- Indigenous Relations
- Training and Cross Cultural Understanding
- Program Development & Delivery
- Cultural Heritage

Mandana respect that First Nations people ought to have career progress, personal growth, and a positive outlook for the future. The company want to create a partnership with the supply chain that operate in the sectors of oil and gas resources, renewables, and construction that will maximise the employment opportunities and will have local content and Indigenous traditional owners' representation.

Mandana believe communities should have an opportunity to industry support and positive change.

Mandana plans to establish, develop, and operate a successful employment opportunity with local services in the supply chain to the renewables, oil and gas resources, energy, and civil construction industries on traditional country of Traditional Owner Groups across Queensland.

Mandana will take the hassle out of recruiting by undertaking the entire recruitment process for Aboriginal and Torres Strait Islander labour hire employees to a range of industries around Australia.

1. Resource, Renewables and Construction sectors; including associated construction and operational activities across Southern Queensland.
2. Opportunities provided for Indigenous procurement and employment via the Commonwealth and Queensland Government's Indigenous Procurement Policies.
3. Projects in the greater QLD Region as they relate to and have connections with Traditional Owner Groups throughout Queensland.

Mandana would like to attract, train, integrate, retain, and develop, Indigenous people required to deliver our plans and projects in the renewable sector.

Mandana want to be the Indigenous employer of choice in the renewable sector.

## Master Hire

Master Hire began on 1 September 1990 in Toowoomba and still remains a family-owned and operated equipment hire company. Since then, Master Hire has expanded throughout Queensland and New South Wales with a branch network servicing Central & Western Queensland, the Darling Downs, South East Queensland and the Mid North Coast of New South Wales. Awarded 2019 Australian Rental Company of the Year, they have built the company by providing hire solutions for the construction, industrial, mining, trades and DIY markets. Master Hire's aim is to be the number one service provider of hire products in the chosen markets. For Master Hire, being 'number one' is not about price, it is not about volume, but rather being a supplier of choice. Partnering with Master Hire means your safety, your deadlines, your budget and your satisfaction are all the focus of the friendly and reliable team. With over 30 years experience, Master Hire aims to provide you with affordable and effective solutions for your equipment hire needs.

## Metalcorp

Metalcorp is part of Orrcon Steel - an Australian manufacturing business of Bluescope. The company is a major Australian supplier of all steel products.

## Metropolis Services Pty Limited

Metropolis Services have specialised in the operation of stone slingers (also known as rock slingers or sand slingers) all over Australia for more than 10 years. Stone slingers are remote controlled vehicles which use rapid conveyors to propel, soil, sand, gravel or mulch up to 40 metres away.

The company's stone slingers are used extensively to:

- back fill cable and pipeline trenches,
- fill biofilters, rain gardens and containment cells
- back fill underground commercial petroleum and sewage tanks
- topsoil large areas including large batters and swales.
- Fill strata vault soil systems and stormwater harvesting chambers

Metropolis Services service Project Managers and Project Engineers in the Civil Landscape, Landscape, Road Construction, Civil Construction, Petroleum and Renewable Energy sectors. They have a fleet of 6 stone slingers with further units planned. The company have a reputation for reliability, safety, and quality with prices that are extremely competitive.

## MFE PTY LTD

MFE defines itself in the fabrication, site maintenance, refrigeration and project management space as a customer centric service provider, specialising in effective delivery of client solutions. In order to deliver this, they have an unrivalled ability to build strong and trusted relationships with employees, clients and the community.

MFE's point of difference is their ability to consistently deliver successful project outcomes. MFE supports clients with a range of solutions, such as urgent breakdown response requiring specialised ad hoc solutions, complex design, fabrication and turnkey project implementation and management of onsite major capital works.

MFE has been accredited to ISO9001, ISO14001 and ISO45001, fostering the direction followed in the daily and long term planning operations of the company. As well as providing evidence of the safety, environmental and quality processes and procedures of the company, this accreditation also confirms the strength and understanding of risk management and compliance MFE attains.

Service Areas:

- Fixed Plant Modifications and Maintenance
- Turn Key Project Management
- Field Services
- Refrigeration and Air Conditioning
- Fabrication

## Mick Sutton Concreting Pty Ltd

Mick Sutton Concreting is an innovative Toowoomba based business that has been operating for 40 years. The business began operation by its founder and director Mick Sutton, who over the years acquired extensive experience in the concreting industry. These attributes have been successfully parlayed into a business that has grown into a leading concreting company in Toowoomba and the surrounding areas. The company also own and operate skid steer loaders and excavators.

With the addition of Joe Coutts and Joe Sutton the business experience in the concrete industry is in excess of 96 years. The driving force behind the continuous and steady growth is due to their vision of being one of the leading and dynamic private concreting companies in Queensland.

With many years of experience in all aspects of concrete preparations and finishing, Mick Sutton Concreting is committed to providing the versatility, quality, safety and on-time performance that the Construction Industry demands. The team is skilled and experienced in handling all sized projects from residential to commercial and industrial projects. Their portfolio of clients covers a range of industries including domestic, commercial, government and industrial. They're able to provide the services expected from a large company with the personalised attention you only receive from a principal-owned and managed business. Mick Sutton Concreting's success can be measured by the long-term relationships with key clients and repeat business, a direct result of their commitment to the health and safety of workers, the environment and quality workmanship for clients.

Mick Sutton Concreting can tailor a package to suit every client's individual needs and objectives. They offer a wide range of concrete services for excavation, concrete and reinforcing and these can be in the form of supply and place package or place only package. Client satisfaction is proof that when it comes to value, quality and responsiveness Mick Sutton Concreting is the company to count on.

Pirtek Chinchilla supply a variety of industries with hydraulic hose and fittings (both components and assemblies), hose management systems and audits. The services are provided onsite or on-call in urgent situations.

### Pirtek Toowoomba

Pirtek specialise in the assembly, supply and installation of hydraulic and industrial hose and fittings to almost any type of business. Providing a 24 hour, 7 days per week on-site mobile breakdown service to its customers from a fixed Pirtek service and supply centre.

### PLC Fencing Pty Ltd

PLC Fencing operates Australia wide and we specialise in security fencing solutions for our clients. We have completed security fencing for a number of substations, site compounds and laydown areas at various windfarms and other renewables projects. We have completed work for most Solar and Windfarm EPCs and also most major energy contractors. We provide a zero fuss solution to get the job done to budget, on time and to specification. We have the resources to back ourselves and we never fail to deliver. We recently completed work for Coopers Gap Windfarm, not far from Dalby. We completed the perimeter fencing of the sub-station for Consolidated Power Projects. This job was completed with zero defects and we received very favourable feedback from the client.

We currently hold a QBCC Licence (#15240074) suitable for fencing construction in Queensland. We can meet any WHS, Quality or Environment requirements as required.

We pride ourselves on providing the simplest and most carefree service for our clients. For more information feel free to peruse our capability statement which can be found at <https://www.plcfencing.com.au/capabilities/>

We're happy to get in touch by phone or email to discuss any questions you might have. (08) 8534 4009 or [contact@plcfencing.com.au](mailto:contact@plcfencing.com.au)

**Poly Pipe Solutions Pty Ltd**

Poly Pipe Solutions (PPS) is a leading provider of end-to-end pipeline solutions for the energy, resources and local government sectors. From pipeline construction and installation to testing, maintenance, repairs and emergency response, they partner with clients to design and deliver projects quickly, safely and within budget.

Their experienced boilermakers can support your maintenance and repair needs and meet ad-hoc and ongoing fabrication requirements.

**ProCrew**

ProCrew is a specialist provider of key operational and maintenance services in the infrastructure and resources sector. Their experience centres around Energy, CSG, Mining and Government industry with a focus on high risk and hazardous areas. The company's preferred clients demand strict compliance to safety, quality and environmental systems and describe ProCrew as proactive, productive and professional.

Services include Land & Vegetation Management, Facilities Maintenance, Civil Construction & Earthmoving, Plant Hire and Labour Hire.

ProCrew's highly motivated, resourced and skilled teams excel at challenging projects whilst managing influences such as remote locations, tight deadlines, plant shutdowns, sensitive environmental areas and logistics and procurement constraints.

Employees are well equipped to succeed with high levels of training, supervision, comprehensive field manuals, late model well maintained plant and equipment and committed management support.

**Project Health Monitoring Pty Ltd**

Project Health Monitoring have developed the PHL App which is a mental health, wellbeing and performance platform designed to identify how and what people are affected by and to assist leaders guide direction through transparency, communication, ownership and accountability. The generated employee data and interaction process assists with risk management, resource utilisation/retention and team engagement.

Individuals Check in at the start of day which allows you to measure their current well-being and their state of preparedness for the day. Check out at the end of day identifies how individuals have been affected by physical impacts throughout the day. This allows individuals to reach out when they are affected by change. Utilising data from individuals provides lead indicators which allows leaders to trend or monitor change of direction to benefit both people and the organisation.

We know if you grow people, the by-product is productivity/performance. Trending of PHL lead indicator data allows visibility into the origin of effects and their impact on team members. This data provides the opportunity for early interaction, reducing the requirement for intervention. This has a positive influence on team members, changes their environment and removes barriers toward achievement.

The platform also facilitates PHL reviews replacing performance reviews. These can be conducted on a regular basis using real-time data highlighting negative and positive trends and provides ability to validate how an individual is tracking towards achieving their own goals and targets, but also the goals and targets of the organisation.

We have also recently incorporated reporting of Indigenous participation and Gender diversity allowing visibility into engagement across demographics and classifications. We can now track, trend and report the following data: Gender and Indigenous Participation rates, engagement by location, local content, specific site data including hours, Supervisors etc, notifications, alerts and interactions.

## Proven Energy

Proven Energy Solutions is located in Toowoomba and services the whole of Southern Qld and Northern NSW. They are electrical contractors specialising in the renewable sector, primarily solar.

The team consists of 20 staff, providing end to end service from the point of sale through to maintenance and hotline support for the life of their systems. With 5 CEC Qualified Electricians, three teams of installers and a four person operations team, Proven Energy have the resources to manage both small and large jobs. They work with quality brands such as REC, Fronius and Delta, who offer 25-30 year warranties on panels and 10-15 year warranties on inverters.

Proven Energy have completed projects ranging in size from 3kw up to 100kw. Over the last 8 years, they've proudly delivered services to over 1,000 Residential, Commercial, Agricultural and Off-Grid customers with quality workmanship and attention to detail.

The Management and Operations Team have extensive experience in the renewables industry and are at the forefront of leading innovations. Working hand in hand with global companies, Managers work with engineers and R&D teams from around the world to innovate new methods of installation and monitoring of solar systems. The company's Management, Sales and Operations teams coordinate to ensure a smooth installation from first contact through to the moment your system is switched on. With a combined experience of 100's of megawatts of installation, the organisation is committed to ensuring the best renewable outcomes for your business.

Employees are trained to install using standard guidelines across all job sites, ensuring each job is done to the same quality and standard. Proven Energy takes quality control very seriously and continually strives to ensure the highest quality and customer satisfaction.

### QCV Pty Ltd

QCV is a specialist provider of worker's accommodation villages across Australia.

They draw on 35 years of experience and business relationships to tailor services to always meet the requirements of their clients. QCV's 'one stop' principle is the key to their proven business model, with all functions handled in-house by an expert team.

This allows the company to offer the following services:

- Full design, planning and regulatory approval services
- Construction, demobilisation and development services undertaken directly by QCV and not with subcontractors
- Complete control over every part of the project process from preliminary design through to village operations
- They only use locally made products and own all of their code-compliant buildings, plant and equipment
- Excellent track record at supplying both turn-key villages and build-own-operate villages on time and on budget
- A professional and simplified approach to managing and administering every aspect of the village operations, using industry leading best operating practices at all times, including catering, housekeeping and management functions

## SATINTOUCH

### Satintouch

Satintouch is the Protective Coatings applicator of choice for Government, Construction and Mining & Heavy Industry across metropolitan, regional and remote areas of Queensland; and an approved service provider on the Local Buy Panel for Road, Water, Sewerage and Civil Works.

Their specialist protective coatings services are mobile, to cost effectively meet 5-20-year coating maintenance cycles for assets including WWTP's, WTP's STP's, Bridges, Manholes, Reservoirs, Tanks, Pump Stations and Pipelines to name a few.

The environment Satintouch work in - and the assets they work on may vary and as such, all works undertaken follow a blast, remediate and coating process, which is tailored to the asset substrate; the supplier coating product specifications and Satintouch's own Safe Work Methodologies, specific to the site and the asset.

### Scott Roadways

Scott Roadways is a locally owned family operated business on the Darling Downs, specialising in Rig Moving and Support, Bulk Water, Civil Roadworks.

They pride themselves on their known integrity, reputation and reliability in our field of expertise. The company has proven efficiency, timely delivery, and brilliant relationships with other companies working within the Oil-Gas fields and Civil Construction. They are financially viable to cover costs of providing service and are very responsive to the needs of their clients. At Scott Roadways they pride themselves on having well presented and extensively maintained equipment to keep them at the fore front of our competitors. All of their equipment runs under the NHVAS (National Heavy Vehicle Accreditation Scheme) under Maintenance Management and Fatigue Management which enables the company to keep equipment in the field for as long as possible.

Scott Roadways have additional equipment so there is no down time in the field for servicing and maintenance schedules. The company employees three fully qualified diesel fitters/mechanics as Driver Operators, who combined have over 35 years' experience with, all types of earth-moving equipment and transport within the oil, gas and civil construction industries. They carry out day to day Maintenance both in the field and at the workshop/depot located at Nardoo St. Ruth-Dalby. They also have access to the other depot located at Roma. All of the companies' vehicles (heavy and light) meet all on site vehicle requirements. Company Vehicles are fitted with IVMS systems, brake off door alarms, fire extinguishers, first aid kits, wheel chocks etc. which allows them to comply with any Civil, or Mining operations.

Scott Roadways' field personnel are trained in their profession, holding the correct licenses and tickets for the equipment that is being operated.

### STEM Punks

STEM Punks provides world-leading STEM (Science, Technology, Engineering and Maths) education programs for students and teachers in primary and high schools with learning outcomes linked to the Curriculum. Teachers are supported by its e-Learning platform, which includes Virtual Reality Classrooms, while students at home have access to a whole new range of STEM tools to help them engage with STEM. Their award-winning programs have learning outcomes linked to the Australian Curriculum for the TSBE region.

STEM Punks mission is to inspire tomorrow's innovators, and teaches programs to children to equip them with a mindset based on innovation, creativity, and entrepreneurship to enable 21st century learning.

With specially created programs for the Resources industry, STEM Punks is pleased to provide relevant education to the TSBE region to provide career pathways and opportunities within the oil, gas, and mining industries.

## SWQ Training

SWQ Training Pty Ltd was established in 2006 by owner and trainer Mat O'Shannessy. From small beginnings in Thargomindah Queensland, SWQ has grown to become an industry leader in civil, high risk, safety, and plant training across Queensland. Based in Toowoomba and Roma Queensland, SWQ provide flexible delivery training options to best support and service a wide range of individuals and companies, ensuring that all students are given the best opportunity to learn and grow in whatever environment their training needs encompass. From big business to individuals, SWQ provides training that suits.

In line with this, Mat and the team at SWQ Training firmly believe in and train by the company's mission, 'quality training, confident and competent people.'

To the team, this mission means more than simply producing students with qualifications but to also ensure all students are equipped through their training to operate safely, competently and confidently in their workplaces. This mission drives the way SWQ performs and heightens the quality of expectations and delivery to above industry standards.

## Totally Workwear

"Totally Workwear is Australia's largest network service provider of workwear, footwear, safety, healthcare, hospitality and professional services uniforms, with 86 stores nationally and growing.

As at 1 July, 2021, the Totally Workwear business consists of 86 stores, 25 in QLD, 20 in NSW, 18 in VIC, 16 in WA and 7 across SA and the NT, with opportunities for continued growth and expansion into new territories across Australia. The networks national footprint, stock supply and service offering is underpinned by a market leading category and product assortment including the WWG owned King Gee, Hard Yakka & NNT brands and extending across a substantial Preferred Supplier base, supporting Operators with strong commercial terms across all key categories and service offerings.

Independently owned and operated the local owners are responsible for their own stores. Toowoomba store is owned and operated by Clive and Julie Wiffen. They purchased the business in 2006 with 1 staff member and now employ 14 full time local staff members.

All Totally Workwear stores have a commitment to provide the highest level of service appropriate to the customer. Given that their core business is clothing people to work at their best every day, they believe they have a good understanding of your requirements.

Each Totally Workwear store has access to an alteration service. Totally Workwear stores can measure and organise for alterations at fitting times and organise for these alterations to be carried out before the garments are received by your staff member.

## Uprify

Uprify is a team of passionate professionals committed to meeting your diverse imagery requirements while minimising risk and providing time and cost effective inspections. Using their advanced drone technology and imaging equipment, the company delivers each project with a professional approach and great attention to detail.

Uprify employ the latest technology and software to deliver quality outcomes. Whether it be telling your brand story through video, simplifying your inspection process, or reducing survey time in the field, Uprify have the solution. There are many sectors benefiting from the use of our drone services, from commercial, to energy and construction, to agricultural. They save time for clients and more importantly, provide them with a safer approach.

Uprify utilise Thermal, Multispectral, Vision, GPR, LiDAR and Photogrammetry camera sensors, which are mounted to drones, allowing them to provide solutions across the energy and rural sectors. These sectors not only benefit through the precision of the 3D maps of their projects but also with the advantage of increased efficiency and safety with the reduced costs compared to historical ground based data capture methods.

## Western Truck Group Pty Ltd

Western Truck Group (WTG) is the home of parts, sales and service for Mack, UD and Volvo Trucks for the greater part of Queensland and the Northern Territory. With branches in Darwin, Cairns, Mt Isa, Townsville, Rockhampton, Mackay, Sunshine Coast and Toowoomba, and also supported by a strong network of regional Customer Service Centres, WTG has the transport needs of its customers well and truly covered. WTG was established in 2018 after the acquisition of Queensland Truck Centre which had been operating in Toowoomba, Mt Isa and the Sunshine Coast areas since 1993. Taking on the existing relationship with VGA, WTG established itself as a vital network partner looking after the transport needs of customers throughout Southern and Western Queensland. As a result of that strong relationship, in March 2020, WTG entered into an agreement with VGA to acquire its dealership operations in Darwin, Cairns, Townsville and Rockhampton. With the recent acquisition of Crokers Truck Centre in Mackay, the WTG network of dealerships and authorised customer service centres will be well positioned to support the transport needs of operators throughout regional Queensland and the Northern Territory.
